Tools: Postman, Beekeeper Studio, VS Code, Firebase, Git/Github

EXPERIENCE

The Living Letters (Freelance) | **Full Stack Developer** | [Website] | [Github] | November 2023
- Developed a single product ecommerce page for upcoming artist, Dulcie Yamanaka.
- Connected MongoDB database for the single product and for future products to be added to the website.
- Utilized Node.js library and Express.js framework to add middleware and routing.
- Designed the front end components with React and Redux, styled with TailwindCSS.
- Connected Stripe API to receive orders and collect payments securely.
- Deployed the backend server on Render and the frontend with Firebase.

Rocco808 (Freelance) | **Frontend Developer** | [Website] | [Github] | November 2023
- Developed a single static page for an upcoming rap artist, Rocco808.
- Designed the frontend components with JavaScript and HTML, styled with CSS.
- Deployed the full website using Firebase.

TECHNICAL PROJECTS

UandI | **Full Stack Developer** | [Website] | [Github] | October 2023
- Developed a thread clone social media website for web developers to network and share their life outside of coding.
- Connected MongoDB database to store the user's data and posts created.
- Utilized the Node.js library and Express.js framework to add middleware and routing.
- Designed the front end components with React and Vite, styled with ChakraUI.
- Incorporated secure log-in authentication for users with Bcrypt and JWT.
- Deployed both the backend server and frontend on Render.

CoderHeaven | **Full Stack Developer** | [Website] | [Github] | September 2023
- Developed a one-stop ecommerce website where developers can find accessories and equipment for their desk setup.
- Connected MongoDB database to store the user's data and new products created on the website.
- Utilized Node.js library and Express.js framework to add middleware and routing.
- Designed the front end components with React and Redux, styled with TailwindCSS.
- Connected Stripe API to receive orders and collect payments securely.
- Deployed the backend server on Render and the frontend with Vercel.

Portfolio Website | **Frontend Developer** | [Website] | [Github] | August 2023
- Developed my own interactive portfolio website from scratch.
- Created a responsive web-design for both mobile and desktop with JavaScript, HTML and CSS. Images designed on my own through Canva.
- Deployed the full website using Firebase.

Bern | **Full Stack Developer** | [Website] | [Github] | August 2023
- Developed a website that connects users with fitness instructors to discover, book and manage fitness sessions.
- Connected PostgreSQL database to utilize relational data queries between users, instructors and classes.
- Utilized Node.js library and Express.js framework to add middleware and routing.
- Designed the front end components with React and Redux, styled with CSS.
- Created a separate log-in authentication/authorization between users and instructors using Bcrypt and JWT.
- Connected Stripe API to receive orders and collect payments securely.

EDUCATION
